

Seeing the raw light path pass through the grating and translate into clean spectral data on the screen. True satisfaction

Elango, and Neel Patel.***

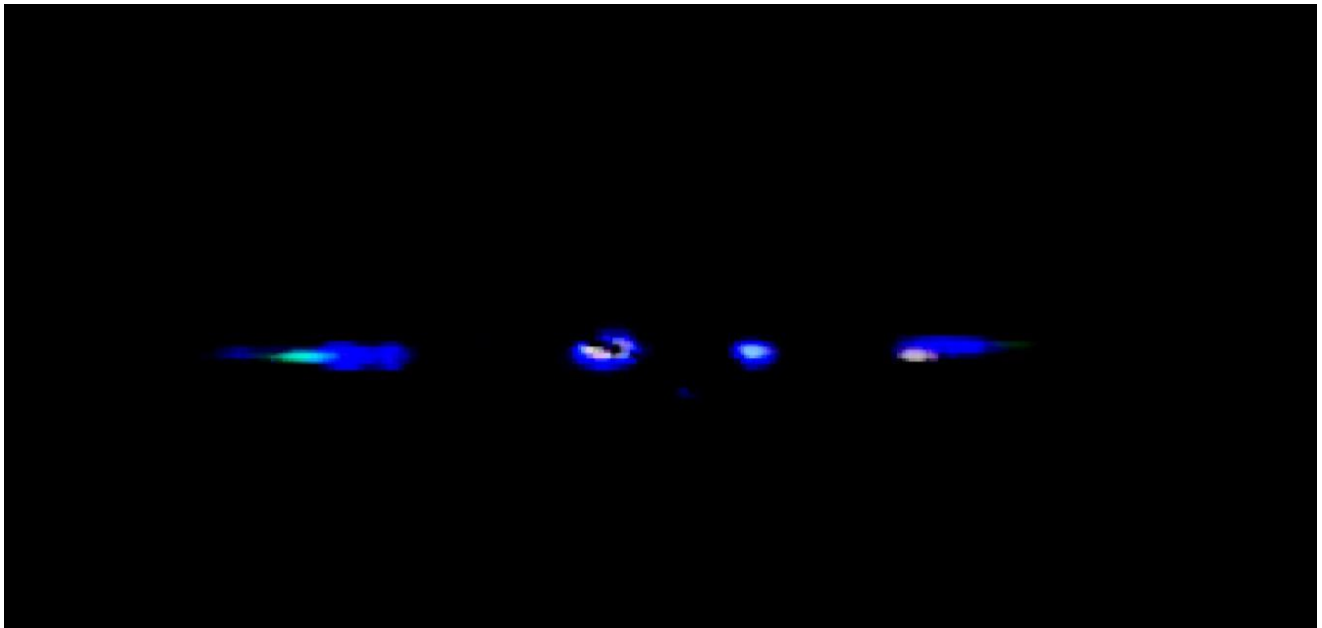

Microspectrometer Report

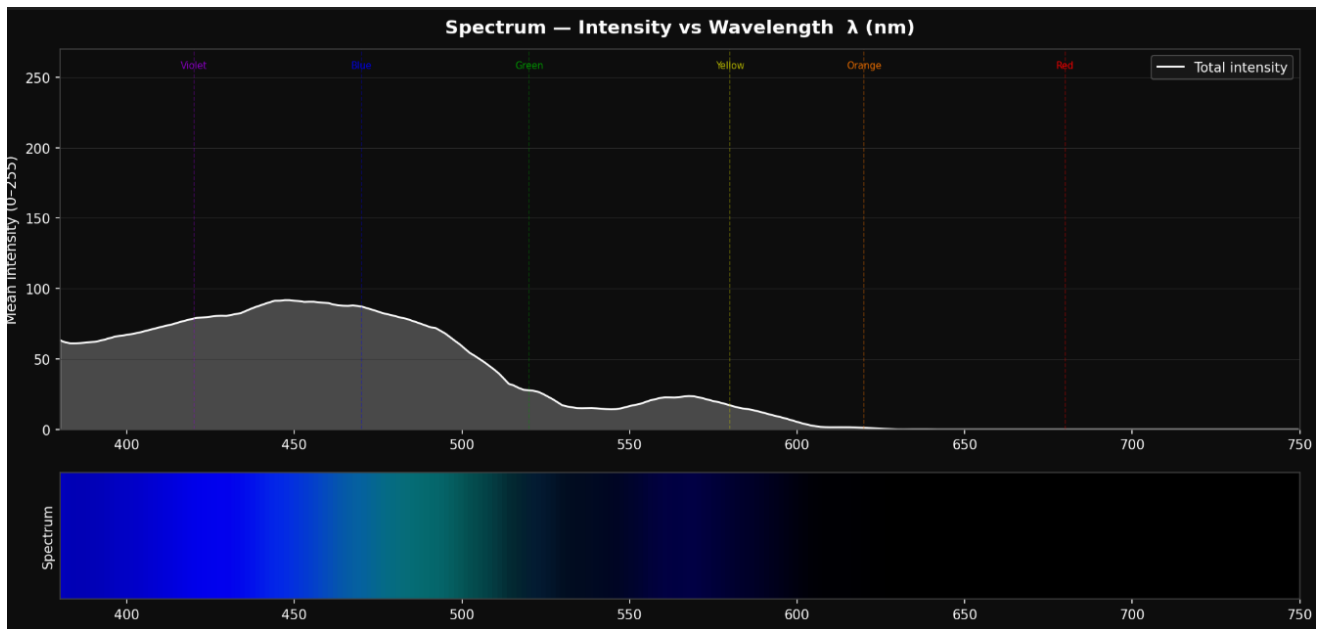

Raw Rainbow: Splitting White Light into its Component Colors.

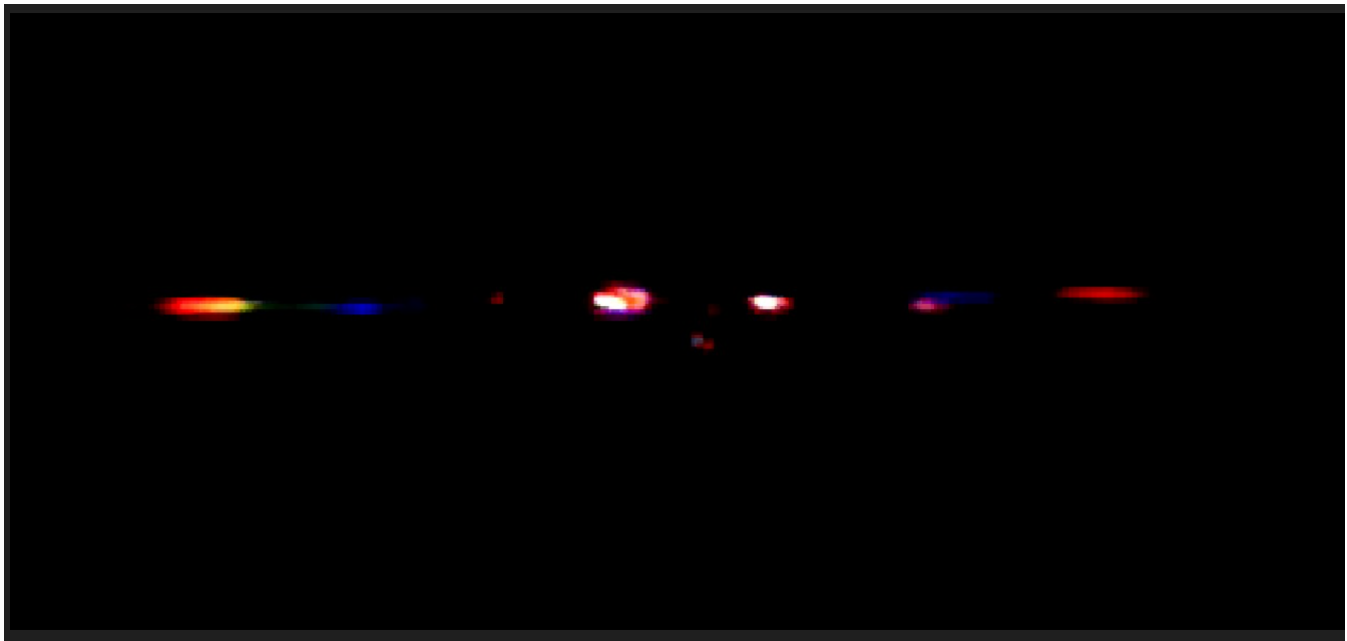

The composition of our Light Source: Intensity across the Visible Spectrum

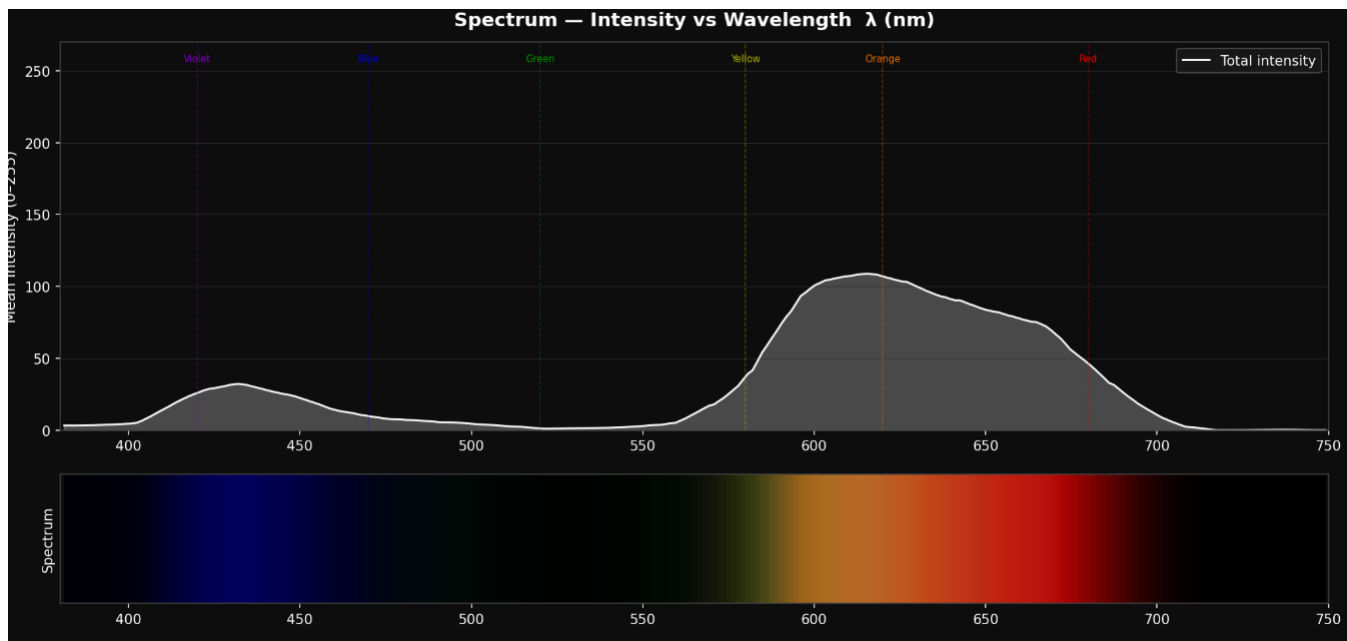

The Deep Blue: Capturing the Transmission of Blue Pigments from blue ink

Blue Light Profile: High-Energy Transmission at 450nm.

How Pink Ink blocks Green light while letting Red pass through.

Spectral Signature: Measuring the Wavelengths of Magenta/Red Ink. 2 peaks can be observed since the ink wasn't purely red and had some blue signature
